Re: Notification of Initial Shipment of Radiologically Contaminated Soil, Lindsay Light II Site, 600 East Grand Ave, Chicago, IL ("Site"); Cooperative Agreement V-00E01070-0;

Dear Ms. Custer:

Please be advised that Navy Pier, Inc. is providing this written notification of Initial Shipment of Radiologically Contaminated Soil from the above Site, pursuant to a request from the United States Environmental Protection Agency (Region V) who oversees the Lindsay Light II Site remediation efforts in Chicago's Streeterville area.

The name of the facility to which the radiologically contaminated soil will be shipped is U.S. Ecology disposal facility in Grand View, Idaho. The shipment of approximately seven (7) cubic yards of pre-1978 11e(2) byproduct material will be made in one (1) cubic yard bags within a lined steel covered roll-off type box. Shipment is being arranged by SET Environment, Inc. of Wheeling Illinois. The initial shipment will involve transporting fill soil in late September 2014, which is expected to arrive at U. S. Ecology the week of September 29, 2014. Although no additional shipments are planned at this time, further shipments could be required if contaminated soil is discovered during future excavation work.

Should you have any questions, please contact us at 262-515-7700.

Regards,

Steve T. Newlin
Senior Project Geologist

Steve C. Kornder, Ph. D.
